

Varun Satapathy

Game Developer — Web Developer — Programmer

 github.com/veyronshark  varun.satapathy@gmail.com

Introduction

Game and Web Developer focused on building **immersive interactive experiences** through code. Strong interest in game mechanics, physics-based systems, UI feel, and performance-oriented web applications. Comfortable translating abstract ideas into playable, user-facing systems.

Technical Skills

Game Development: Godot 4, GDScript, 2D Games, Physics-based Gameplay, Game UI, State Management

Web Development: HTML5, CSS3, JavaScript, TailwindCSS, React, Node.js, Express, Flask, GSAP

Programming & Tools: Python, Java, C, Git, Version Control, Algorithm Design

Databases: MySQL, PostgreSQL

Projects

Wizard Wander — Android Game itch.io/veyronshark/wizard-wander

- Developed a 2D infinite runner game featuring platform traversal, enemy interactions, and progressive difficulty.
- Implemented player movement, collision handling, and enemy logic using Godot 4 and GDScript.
- Designed gameplay flow to maintain immersion and responsiveness on mobile devices.

Dungeon Duels — Web-based Co-op Multiplayer Game itch.io/veyronshark/dungeon-duels

- Built a local multiplayer 2D combat game playable on a single keyboard.
- Focused on tight controls, player feedback, and balanced mechanics.
- Deployed as a browser-playable experience.

Polarity Dash — Web Game itch.io/veyronshark/polarity-dash

- Designed a polarity-based game mechanic where player state alters environmental interactions.
- Implemented level logic, physics responses, and win/fail conditions.
- Emphasized puzzle-like progression and mechanical clarity.

SyncSpace — Team Collaboration Web App syncspace-client.vercel.app

- Developed a full-featured collaboration platform with messaging, video calls, polls, and project tools.
- Built using modern web stack with focus on scalability and real-time interaction.
- Designed UI flows to support distributed team productivity.

LaunchPad — Interactive Web Simulation veyronshark.github.io/launchpad

- Created a mathematical and visual simulation inspired by a launchpad instrument.
- Implemented matrix-based calculations for lighting and interaction logic.

Personal Music Player — Web App veyronshark.github.io/music-player

- Built a custom music player with modern playback controls and polished UI.
- Focused on smooth interactions and visual design.

Experience

Game Developer Intern - Ojas Neurotechnologies

Oct 2025 – Present

30-Microgames Project

- Worked on several minigames, made for toddlers and young children
- Worked on main website, including frontend and backend containing players(children), parents, teachers, school admins web application
- Contributed to foundation of development environment of the emerging startup

Main Project Developer - Wizard Wander

Nov 2025

Self-Directed Project

- Worked on game design of the components of the game
- Created advanced spawning algorithms and optimization techniques

Main Project Developer - Dungeon Duels

Oct 2025

Self-Directed Project

- Worked on core game logic and game design

Main Project Developer - Polarity Dash

Oct 2025

Self-Directed Project

- Made for BYOG-2025 game jam. Game was made in 3 days
- Worked on core game logic, level design, and game design
- Made visual assets for all components

Main Frontend Lead - SyncSpace

Sept 2025 – Nov 2025

Academic / Team Project

- Created reusable components in React, along with state management across the app
- Styled the components and pages using TailwindCSS
- Set up routes and protected routes to ensure smooth UX
- Focused on UX and UI Design

Education

Bachelor of Technology (B.Tech)

XIM University / School of Computer Science

2023 – 2027

Additional

- Strong interest in game feel, immersion, and player perception.
- Actively builds and ships projects independently.
